

Responsive Web Design

using ZURB Foundation 5

by Chris Morrow

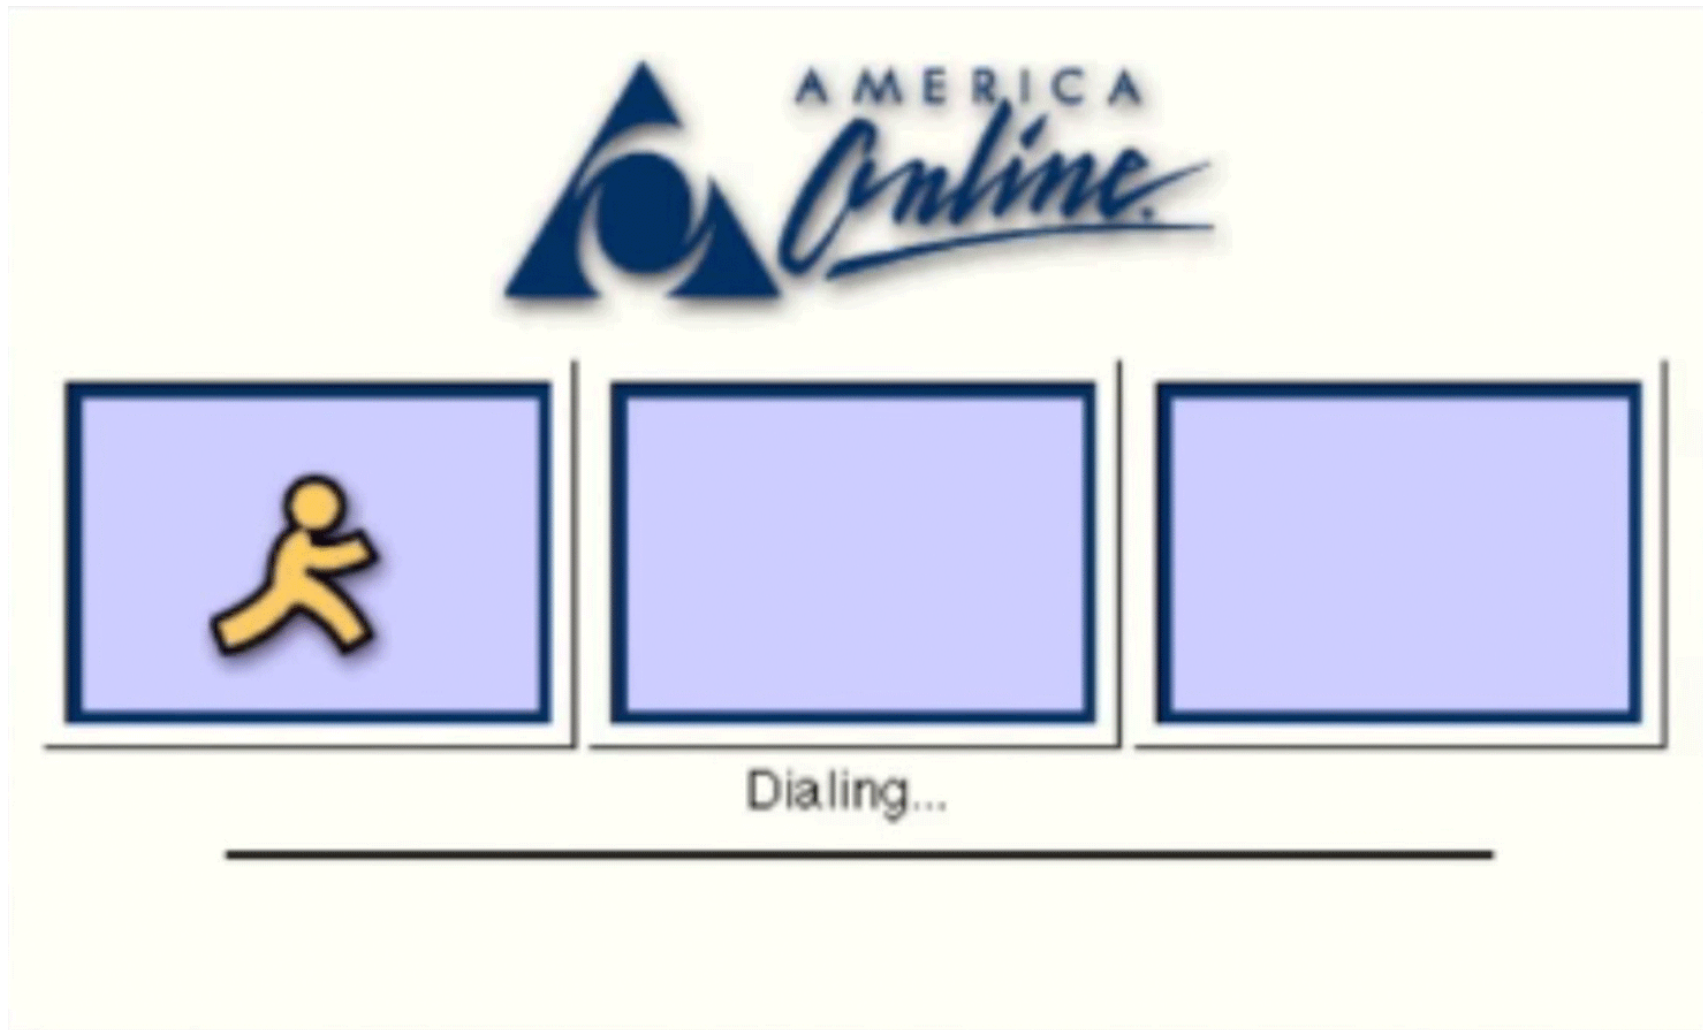

SOLTECH 

THE PLAN

- What is Responsive Web Design?
- Responsive vs Adaptive vs Mobile vs App
- UI Dev Tools
- Frameworks
- RWD: Using Foundation 5

REMEMBER THIS?

NOW WE HAVE

AWD vs RWD vs ____

AWD: All Wheel Drive

RWD: Rear Wheel Drive

FWD: Front Wheel Drive

NOW WE REALLY HAVE

- **AWD:** Adaptive Web Design
- **AWD:** Adaptive Web Delivery
- **RWD:** Responsive Web Design
- **SWD:** Situational Web Design

WHAT IS RESPONSIVE WEB DESIGN?

- RWD is creating a website that dynamically changes a.k.a "responds" to all viewport sizes, device orientations, and device resolutions.
- Ethan Marcotte: three tenets of RWD are a fluid grid, flexible media, and media queries.

PROS & CONS

Responsive vs Adaptive vs Mobile vs App

ADAPTIVE

[liquidapsive.com \(http://www.liquidapsive.com/\)](http://www.liquidapsive.com/)

MOBILE

Pros:

- Simpler Code
- Better Performance
- More Cost-effective than Building a Native App

Cons:

- Have to maintain two sites
- Not as SEO Friendly as Responsive
- Still needs to be Responsive

APP

Pros:

- Better User Experience
(mobile-first-only)
- Native UI
- More features (camera, contacts, etc)

Cons:

- More Time and Money
(App Store review anyone?)
- Have to maintain app and website
- May be deleted
- Still needs to be Responsive

RESPONSIVE

Pros:

- One Site to maintain
- SEO Friendly
- Lower Cost to Build and Maintain

Cons:

- More Complex Code
- Bad Performance
- ~~Bad Performance~~: false, for the most part

RWD: MISCONCEPTIONS

RWD Causes Poor Performance

*" Because the images on a responsive site are just visually scaled down and **not re-sized**, smartphones and tablets can notice a **lag in loading speeds**, especially when being used on a mobile network "*

"Responsive Design is Expensive"

When compared to maintaining a separate mobile site, responsive sites can be equal or lower in cost

*"All responsive websites
look the same"*

<default Bootstrap styles>

*"Anyone who embraces
Responsive Web Design is stupid"*

Anyone who embraces
Responsive Webdesign
is stupid

Ric van Westthreenen
Youwe

ZURB QUOTE

"Friends don't let friends design in 960px"

UI DEV TOOLS

YO

GRUNT

BOWER

[yo](#) scaffolds out a new application, writing your Grunt configuration and pulling in relevant Grunt tasks and Bower dependencies that you might need for your build.

The **Build System** is used to build, preview and test your project. [Grunt](#) and [Gulp](#) are two popular options.

The **Package Manager** is used for dependency management, so that you no longer have to manually download and manage your scripts. [Bower](#) and [npm](#) are two popular options.

<http://yeoman.io/> (<http://yeoman.io/>)

BENEFITS OF UI TOOLS?

- **Grunt:** run local server
- **Grunt:** automation
- **Grunt:** livereload
- **Yeoman:** starter projects
- **Bower:** dependency management

Q & A

- How many have used a framework or library?
- **Try it for yourself**: make an informed decision with firsthand knowledge
- **Understand how it works** not just what it does
- Take "it" apart, break it, then **piece it together in "your" way**

FRAMEWORKS

- Which one to choose?
- Foundation vs Bootstrap vs Skeleton vs YAMML 4 vs Gumby vs Pure CSS vs Kube vs Columnal vs Toast vs 1140 Grid vs 960 Grid System vs Gridiculo.us
- Choose what you like best
- Only use what you need

**YO DAWG, I HEARD YOU LIKE
FRAMEWORKS**

**SO WE PUT A FRAMEWORK IN YOUR FRAMEWORK
SO YOU CAN CODE WHILE YOU CODE**

quickmeme.com

RWD USING FOUNDATION 5

- The Grid
- Responsive Images / Media
- Media Queries
- Customizing / Settings

THE GRID

- Rows and Columns
- Centering
- Nesting
- Ordering
- Customizing the Grid

RESPONSIVE IMAGES / MEDIA

- Images
- PictureFill 2.0
- Video
- Welcome Interchange!

FOUNDATION 5: MEDIA QUERIES

- small: 0 - 640px
- medium: 641px - 1024px
- large: 1025px - 1440px
- xlarge: 1441px - 1920px
- xxlarge: 1921px+

FOUNDATION 5: CUSTOMIZING

- Understanding the Setup
- Settings
- Components
- Make It Your Own

RWD TESTING TOOLS?

- Google Chrome (Emulation)
- Firefox (Responsive View)
- iOS Simulator (Mac only)
- Browserstack
- Your Own Real Devices
- GhostLab (Mac Only)
- Adobe Edge Inspect

THE END
